

PAINTING GUIDE

GLOWING EYES

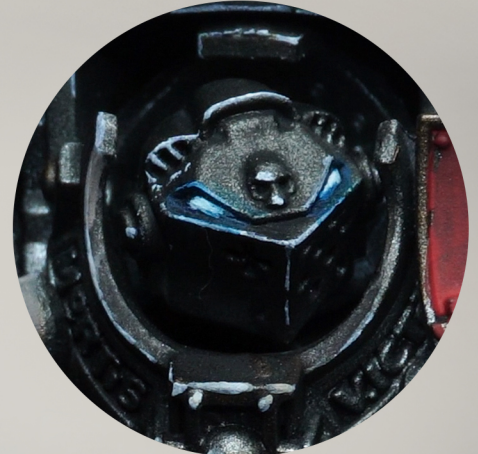

GLOWING EYES

1. Painting the eyelids with White, while also giving the edges of the helmet some White highlights. Any mistakes were corrected with Black + Doom Death Metal.

2. Using thinned Frostheart on top of it and spreading it onto the surrounding section.

3. Again painting the eyelids White.

4. Mixing Frostheart with a tiny bit of White and painting the thinned mix on top of the eyelid and surroundings.

Again painting the eyelid White.
And done!

Quick note on thin brush strokes:

It's all about paint consistency - around a 50/50 mix of paint and water works well for me when using White. There's always a bit of a learning curve to find the sweet spot between smooth flow and solid coverage. I tend to struggle with it from time to time, therefore I always draw a small test line on my thumbnail before applying the mix to the mini.
